

1. The 14 Learning Style Subfactors

I. Learning Style (Visual)

You learn best when information is presented visually. Diagrams, charts, videos, flowcharts, and mind maps help you retain concepts. Ideal for subjects involving patterns, relationships, or visual design.

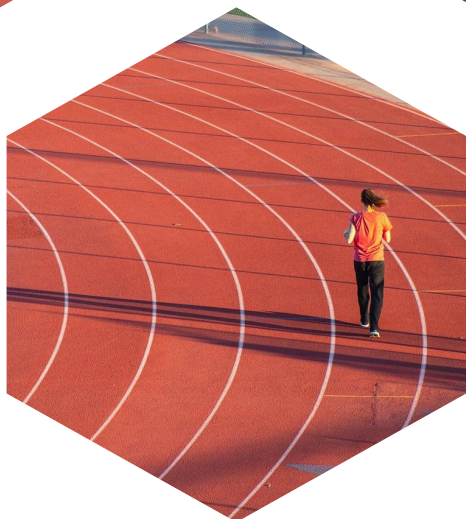

II. Learning Style (Auditory)

You prefer listening to explanations. You benefit most from lectures, discussions, podcasts, and verbal storytelling. You may process concepts best when you hear them aloud or engage in conversations.

III. Learning Style (Reading/Writing)

You thrive on written information—books, notes, handouts, or written instructions. You prefer traditional study methods and express your understanding best through writing.

IV. Learning Style (Kinesthetic)

You learn by doing. You retain information through movement, experiments, hands-on activities, or real-world engagement. Ideal for lab-based or field-based learning.
